Social Studies Matters!

Social studies is a big, big concept. Students often hear the term in their classrooms but might not consider what it actually is. Social studies is the study of people and the places where they live. That explanation may seem simple, but that encompasses a whole lot! This beneficial series—a cornerstone of any elementary education library—breaks the complex term down into easy-to-understand categories, including citizenship, culture, history, and economics. Each valuable volume features accessible text and eye-catching photographs that aid readers in understanding what these crucial concepts mean and how they relate to their communities and to their lives.

- Each volume offers at-level social studies curricular content
- Readers are supported in decoding vocabulary through closely connected images that accompany the text
- Series nurtures an interest in and an understanding of local, national, and global communities

Discover More: Economics in Your Community

Economic concepts can be complex, but understanding them leads to a lifetime of financial competency and independence. This engaging set aims to help young readers understand the basics of successfully participating in today's evolving global economies. Simple and straightforward explanatory text covers curriculum content including how to secure a job with income, how banks work, strategies for saving and spending, the role of supply and demand in economies, and the importance of a balance of consumers and producers. Lively and colorful images or diagrams on every spread show relatable examples of each economic concept.

- "Word Wise" fact boxes define more advanced terms on the same spread they are used to enhance comprehension
- "Consider This" and "Compare and Contrast" fact boxes offer exercises for making connections between text content and the outside world
- A "For More Information" section offers further resources for learning about economic systems

Consumer and Capital Goods

Consumer and capital are the two specific types of goods. Consumer goods are the final products purchased by consumers, such as soap, toys, and pillows. Capital goods are the materials used to produce other goods and services. The cloth used to make a pillow and the plastic used to make a toy are just a couple of examples of capital goods.

Consumer goods, such as a bed or clothing, can probably be found in your own room!

Fruits and vegetables are goods that can be grown locally or out-of-state. Some fruits can only be grown during certain seasons, which can affect the taste.

Some goods are grown or produced locally. For example, farmers might grow crops and distribute them in their community to local grocery stores. Trees from a local forest might be used to build homes. Different states and countries can even send goods and services around the world.

Consider This
Do you buy your toys and books online or in a store? Do you know where they're being made or being shipped from?

Unlimited Wants, Limited Needs

Every day, we make decisions about what we need and what we want. You decide what to eat, what to wear, and what games to play. You also decide what you want to buy. You can't have all of the things you want all of the time, so you have to make choices. Yours and everyone else's decisions affect the economy as a whole.

You, as a consumer, play an important part in supply and demand. Each person's wants and needs are important for producers to note in order for the economy to function.

Producers have to make sure they supply enough of a product to meet their customers' demands. If the demand is high, the price will likely increase.

Producers have to make choices as well. They must decide how to use the available resources to make products that people will want to buy. Then, they must try to create enough products that will match the demands of consumers.

Consider This
If companies do not have enough resources to fulfill a need, how will this affect the production and sale of a product that is made with a limited resource?

U.S. Presidents: Myths or Facts?

The United States has had many presidents in the course of its short history. Each president has left their own mark on the history books, and many fascinating stories surround each of them. However, sometimes those stories are based on inaccuracies in reporting, and some were made more exciting by biographers. Some are just plain false! The books in this series explore six larger-than-life figures in U.S. history, focusing on the facts and myths that have shaped our modern understanding of them. Readers are sure to enjoy discovering fascinating facts about U.S. presidents, as well as learning more about the myths that have clung to each of the figures in this set well beyond the end of their terms as president.

- The manageable text is paired with stunning primary sources to aid reader comprehension
- Each book features a timeline of events in the president's life
- The set covers topics and information essential to the elementary social studies curriculum

Ask an Animal!

Kids ask lots of questions! What would it be like if an animal was there to answer some of their biggest questions about the natural world? Readers see for themselves in these helpful introductions to habitats. Many familiar science topics are covered—from biomes to adaptations—but with a fun twist! A cute cartoon animal guides readers through their habitat, answering common questions and sharing fun facts along the way. A polar bear guides them through the Arctic, a frog takes them on a tour of a pond, and a toucan gives them a bird's-eye view of the rainforest!

- The delightful design combines adorable illustrations and full-color photographs
- The interactive question-and-answer format keeps readers engaged and allows them to independently evaluate how much they've learned at the end of each volume
- The creative approach to life science is meant to instill a sense of curiosity in readers about the world around them and to teach them that it's good to ask questions

NEW SPRING 2024!

Bring Science Home

When science learning can extend beyond the classroom, students can make connections between science concepts and the real world. In this expanding set, *Scientific American* presents unique, science-related activities and projects involving everyday materials, inspiring readers to explore the world of science around them. Including volumes of experiments having to do with STEAM, life science, physical science, food science, and more, it fits in perfectly with middle school curricula. Clear instructions guide readers through each project and offer ideas for expanding their scientific discoveries. Thoughtful questions throughout engage readers with both the experiment or activity and the science concept it is exploring.

- Includes science fair ideas
- Each volume concludes with discussion of the scientific method
- “Background” and “Observations and Results” sections allow readers to make connections to science classroom learning

Solidifying Science

Why Can Certain Fruits Ruin Your Gelatin Dessert?

MAKE SURE YOUR GELATIN TREAT STAYS WIGGLY WITH THE FOLLOWING ACTIVITY.

Have you ever noticed that if you're making a gelatin dessert, such as JELL-O, it's not recommended to use certain fruits, like pineapple? Why is this? These fruits may prevent the gelatin from solidifying. In this activity, you'll get to determine if certain enzymes in some fruits can keep the gelatin from gelling—and whether there's a way to still include these fruits without ruining your gelatin dessert!

PROJECT TIME

30 minutes, plus up to 4 hours of waiting time

KEY CONCEPTS

Food science
Chemistry
Gelatin
Fruits
Enzymes
Heat

BACKGROUND

If you like making gelatin for dessert, the box often recommends not adding certain kinds of fruit, including pineapple, kiwi, mango, papaya, figs, or guava. People have a hard time getting the gelatin to solidify when they add these fruits. Gelatin is made from collagen, which is a structural protein found in all animals. Collagen is found in many parts of the body and helps give animals their structure, or shape. Gelatin, which is a mixture of collagen proteins, solidifies when you cook it because its proteins form tangled mesh pockets that trap the water and other ingredients. After the gelatin cools, the proteins remained tangled. This results in your wiggly/jiggly gelatin dessert.

The fruits listed above contain proteases, which are enzymes. Enzymes help make certain chemical reactions happen. Proteases specifically act like a pair of scissors, helping reactions take place that cut other proteins up. In this activity, you'll explore whether these protease enzymes are preventing the gelatin from solidifying by cutting the gelatin's collagen proteins into such small pieces that they are no longer able to tangle together and create a semisolid structure). To do this, you'll inactivate these proteases by using heat.

MATERIALS

- 1 cup of one of the following types of fruit, which should contain proteases: figs, guava, kiwi fruit, mango, papaya, or pineapple. Make sure the fruit is fresh.
- Knife
- Cutting board
- Measuring cup
- Water
- Stove top
- Fruit/vegetable steamer (optional)
- Boil, large enough to hold 3 cups (750 mL) of liquid
- Clock
- Three plastic cups or drinking glasses, each at least 12 ounces (355 mL) in size
- Tape and permanent marker or pen (optional)
- Gelatin mix (such as JELL-O), enough to make 3 cups of gelatin
- Three utensils for stirring, such as spoons or forks
- Refrigerator
